

TechBridgeSM

*Do you need help connecting your technology to security customers?
Want to reach The Boeing Company, Northrop Grumman Corporation, or even NSA?
If so, TechBridgeSM is your solution.*

The Chesapeake Innovation Center, America's first homeland and national security accelerator, invites you to participate in our no cost, proprietary TechBridge program.

TechBridge connects major users of technology with small, innovative companies at the forefront of technology. Our unique, innovative program brings win-win outcomes to both sides of the technology supply and demand cycle.

Our Partners, strategic to America's national security, include The Boeing Company, Northrop Grumman Corporation, ARINC, the National Security Agency, Next Century Corporation, Athlone Global Security and the list is growing. These organizations seek innovation. We provide it by sourcing and screening early stage technology companies.

There is no charge to you and there isn't a better pipeline to the market you want to reach.

Through TechBridge, innovators have the unique opportunity to present to the CIC Partners, potential customers for you! In one smooth process, TechBridge provides:

- **Dramatically shorter sales cycle:** What could take a year or never if innovators don't find the right opening – can be done in 2 months by registering with TechBridge.
- **Business opportunities:** Technology companies using TechBridge find Partners interested in acquisition, investment, customer contracts, teaming, licensing, SBIR or DARPA research funding, small business contractors and more.
- **Visibility:** Presenting to this coveted market segment raises a company's visibility and promotes their branding to the marketplace;
- **Market Feedback:** By presenting, candidates receive invaluable Partner feedback and an unprecedented opportunity to feel the pulse of the current market. With this feedback, the product or message can be refined to gain an edge over competitors or fit into a particular niche not otherwise known about. Market feedback reduces a fledgling company's risk by validating or refuting its assumptions.

We seek technologies in one of our three portfolio strategy areas:

- **Security:** location based technology, high-grade network security, high-grade authentication/identification, wireless security, high-grade information assurance, self-organizing networks, CCTV signal intelligence, user assurance, C4ISR, sensors (CBRNE, IED, and WMD)
- **Informatics:** data handling and fusion of enormous quantities of data that is multi-lingual, multi-media, multi-source data which would include data manipulation, mining, visualization, intelligent agents, prioritization, pattern matching, entomology detection, tactical pre-filtering, cognitive processing, interpretation and distribution
- **Massive Data Requirements:** high volume/speed data collection, zero-izable and advanced terra or peta byte storage, high speed computing, semantic, ontological or graph database architectures, advanced power supplies
